2235. MAZUROWA A. and MARCINIAK-SKUBISZYNSKA A. 1. Klin. Chorób Wewnet. Akad. Med., Poznan. Zmiany w sercu w przebiegu goscica pierwotnie przewleklego. Na podstawie wlasnych spostrzezen *Heart lesions in the course of rheumatoid arthritis on the basis of personal observations* Pol. Arch. Med. wewnet. 1956, 26/6 (889—897) Tables 2

Although a theory has been accepted that rheumatoid arthritis does not injure the heart, anatomo-pathological investigations of many authors show from 4 to 90% of lesions in the heart in the course of rheumatoid arthritis. The results of clinical examinations are divergent also, but the percentage of lesions detected in the heart is considerably lower. One hundred patients with rheumatoid arthritis were examined and the impairment of the heart was found in 25% of the cases, among them 7 cases of defect of the bicuspid valve. Only in one case was the circulation failure noted. Cases with acute commencement of the disease, which in its further course took on the form of rheumatoid arthritis were taken into account. A group of 40 patients below the 40th year of life was separated and the same percentage of the lesions was found among them as in the older patients. There were no clinical symptoms of pericarditis. No typical syndromes of coronary disease were noted, although the ECG investigations in a great percentage of cases showed lesions diagnosed as myocardial hypoxia. It seems that rheumatoid arthritis in its localization does not avoid the heart, but causes musculovascular lesions in it as well.

EXCERPTA MEDICA Sec.13 Vol.1/6 Cardiovascular June 57

1574. MAZUROWA A., CHODERA L. and SMARSZ C. 1. Klin. Chor. Wewn. A. M., Poznan. Zmiany elektrolitów krwi w czasie poinsulinowych lekkich stanów hipoglikemicznych i ich wpływ na krzywa elektrokardiograficzna *Blood electrolytes changes during the post-insulin light hypoglycaemic states and their influence on the ECG curve* Pol. Arch. Med. wewn. 1956, 26/9 (1349—1364) Graphs 5 Tables 1

In the course of the treatment of diabetes with insulin there were observed severe hypoglycaemic comas, which did not always disappear in spite of administration of big doses of glucose. Hypokalaemia was conjectured as a possible explanation. During the light hypoglycaemic states, which had been therapeutically applied, there were investigated in 12 patients: behaviour of the sodium, potassium and sugar levels in the blood, while at the same time the ECG curves were performed, and in a part of the cases the phonocardiographic tests as well. In almost all the cases the decrease of sugar level in the blood was accompanied by a distinct decrease of potassium level in the serum, with an unchanging sodium level. The ECG changes observed are typical both for hypoglycaemia and for hypokalaemia. At the same time the phonocardiogram showed sometimes a picture which is called by Hegglin the energetic-dynamic circulation insufficiency. A thorough analysis of the curves showed that the ECG changes appear at the moment of decrease of the sugar and potassium levels in the blood, and they withdraw with the return of sugar level to normal, in spite of the potassium level continuing to be decreased. In some cases, although the potassium level is not decreased, the typical ECG changes, appearing with the decrease of the sugar level, were noted. It has to be concluded that the ECG picture, seen during the hypoglycaemia, depends in the first place on the sugar level in the blood, and not on the decrease of the potassium level. (VI, 18)

EXCERPTA MEDICA Sec 18 Vol. 1/12 Cardiovas. Dis Dec 57

3342. MAZUROWA A. and SEIDEL A. r. Klin. Chor. Wewnętr. Akad. Med., Poznań. *Zmiany EKG podczas napadów paralysis paroxysmalis ECG changes during seizures of periodic paralysis* Pol. Tyg. lek. 1957, 12/32 (1240—1242)

This is a description of a case of paroxysmal paralysis, in which during the provoked attacks of paralysis a decrease of the potassium level in the blood serum and ECG changes characteristic for hypopotassaemia had been noted. In this case the dose of potassium chloride necessary to interrupt the paroxysm has been fixed and it has been recommended as a therapeutic dose. The dependence of ECG changes on the potassium level in the blood serum and on the carbohydrate metabolism is discussed, and the role of the cortico-hypothalamo-hypophyseal-adrenal system is emphasized.

Title P Polane Dyeing with Unsoluble AzO-Dyes Formed on Fiber.

Orig Pub : Przem. włokienniczy, 1957, 11, No 1, 20 - 23.

Abstract : Dyeing of the polyamide polane fiber using azotols (I)
and azoamines (II) of Polish and partly German origin was
carried out parallely by 3 methods. The first method based
on preliminary application of I to the fabric with fol-
lowing combination with dinitrated II is carried out impreg-
nating the fabric in 2 variations: a/ either with an alka-
line I solution, 2/ or with a suspension of I. By the se-

POLAND / Chemical Technology, Chemical Products and Their Application. Part 4 - Dyeing and Chemical Treatment of Textile Materials.

H-33

Abs Jour : Ref. Zhur. Khimiya, No 4, 1958, 13309.

Abstract : cond method, the fabric is soaked first with an aqueous dispersion or solution of the hydrochloric salt of II, after which the dinitration of II on the fiber and the combination under the action of the I solution are carried out. The third method consists in a simultaneous treatment with I and II with following dinitration and combination in an acid solution of NaNO_3 . According to one variation, a paste of I and II is made with the addition of alcohol, NaOH and hot water; this paste is applied to the fabric at 70 to 80° in the duration of 20 min., and the dinitration and combination is carried out in a solution containing 2 g of NaNO_2 and 5 mlit of 80%-ual HCOOH per lit at 70 to 80°. According to another variation, fine dispersions of I and II are prepared by precipitating I from an alkaline solution under the

POLAND / Chemical Technology, Chemical Products and Their Application. Part 4 - Dyeing and Chemical Treatment of Textile Materials.

H-33

Abs Jour : Ref. Zhur. Khimiya, No 4, 1958, 13309

Abstract : action of 5%-ual HCl and II from an acid solution of its hydrochloric salt under the action of 5%-ual NaOH. After that the fabric is soaked in a mixture of both suspensions in the ratio of 1 : 1 and dinitrated. It is found that by the first method, non-intensive, instable and dull colors are produced. The second method, especially of the variation b, yields good results. The third method yields also good results, its first variation being simpler and more economical than the second, which yields relatively faster and brighter, although less intensive colorations.

SOV/20-129-2-6/66

TITLE: On the Solution of the Dirichlet Problem for Equations of Elliptic Type

PERIODICAL: Doklady Akademii nauk SSSR, 1959, Vol 129, Nr 2, pp 257-260 (USSR)

ABSTRACT: In the bounded closed domain Ω of the E^n with the two times piecewise continuously differentiable boundary Γ the author considers the elliptic equation

$$(1) \quad \mathcal{L}u = \sum_{i,j=1}^n \frac{\partial}{\partial x_i} (a_{ij}(x) \frac{\partial u}{\partial x_j}) + \sum_{i=1}^n b_i(x) \frac{\partial u}{\partial x_i} + c(x)u = f(x),$$

where $a_{ij}, b_i \in C^{(1)}(\Omega)$, $c \in C^{(0)}(\Omega)$ and

$$(2) \quad \sum_{i,j=1}^n a_{ij} \alpha_i \alpha_j \geq \mu^2 \sum_{i=1}^n \alpha_i^2, \quad \mu^2 = \text{const} > 0.$$

He denotes $u(x) \in W_p^{(1)}(\Omega) \cap W_p^{(2)}(\Omega)$, ($1 \leq p \leq \infty$) as generalizedsolution of the Dirichlet problem in $W_{p,0}^{(2)}$, if it satisfies

Card 1/3

(1) almost everywhere. Let λ^2 be the first eigen value of

66721

SOV/20-129-2-6/66

On the Solution of the Dirichlet Problem for Equations of Elliptic Type

the operator $\mathcal{L}u = - \sum_{i,j=1}^n \frac{\partial}{\partial x_i} (a_{ij}(x) \frac{\partial u}{\partial x_j})$ in the class $W_2^{(2)}(\Omega)$.

Theorem 1: If in Ω there holds the inequality

$$(3) \quad 4\alpha(1-\alpha)\lambda^2 - c(x) + \alpha \sum_{i=1}^n \frac{\partial b_i(x)}{\partial x_i} > \mathcal{R}^2 = \text{const} > 0$$

for an $\alpha \in [0, 1]$ and if it is $f(x) \in L_{1/\alpha}(\Omega)$, then the solution $u(x)$ of the Dirichlet problem in $W_{1/\alpha, 0}^{(2)}$ satisfies the inequality

$$(4) \quad \|u\|_{L_{1/\alpha}(\Omega)} \leq \frac{1}{\mathcal{R}^2} \|f\|_{L_{1/\alpha}(\Omega)}$$

If $\alpha = 0$ or $\alpha = 1$ and $\mathcal{R}^2 = 0$, then (4) holds with another constant.

Theorem 2: If in Ω there holds (3) for $\alpha \in [0, 1]$, then for the solution of the Dirichlet problem $u(x) \in W_{p, 0}^{(2)}(\Omega)$, $1 < p < \infty$

Card 2/3

there holds the a priori estimation

66721

SOV/20-129-2-6/66

On the Solution of the Dirichlet Problem for Equations of Elliptic Type

$$\|u\|_{W_p^{(2)}(\Omega)} \leq c \|f\|_{L_p(\Omega)}.$$

Further three theorems bring new statements of existence and uniqueness for the non-linear equation

$$(8) \quad \mathcal{L}u = \varphi(x; u, u_{x_j}).$$

The author mentions V.V.Nemytskiy and A.I.Koshelev.

TITLE: Double layer potential for non-regular regions

PERIODICAL: Akademiya nauk SSSR. Doklady, v. 147, no. 3, 1962, 523 - 525

TEXT: A convex region $\Omega \subset E^3$ with the boundary Γ is considered. Γ is projected from an arbitrary point P onto the unit sphere S_P with the center P by the continuous mapping $\pi_P(\Gamma)$. The absolute variation v_P^0 of the mapping $\pi_P(\Gamma)$ is assumed to be uniformly bounded for all points $P \in E^3$. For any Borel set $\xi \subset \Gamma$, the "angle" $\omega(P, \xi)$ is defined in the following way: $\omega(P, \xi) = v_P(\xi)$ for $P \in \xi$, $\omega(P, \xi) = \omega(P, \xi \setminus P) + \omega(P, P)$, where $\omega(P, P) = 2\pi - \omega(P, \Gamma \setminus P)$, for $P \in \xi$. Here,

$$\|T\| = \frac{1}{2\pi} \sup_{\text{set } \Gamma} \int_{\Gamma} |\omega(S, dX)| \leq \frac{M}{2\pi} + 1.$$

Card 1/3

S/020/62/147/003/002/027
B112/B186

Double layer potential for...

where $n_{\ell}^{+}(Y)$ and $n_{\ell}^{-}(Y)$ are the numbers of the original points on ℓ of the point $Y \in S_P$, the topological indices of which, referred to the mapping $\pi_P(\Gamma)$, are equal to +1 and -1, respectively. It is shown that

$$\omega(P, \Gamma) = \begin{cases} 4\pi, & \text{if } P \in \Omega; \\ 2\pi, & \text{if } P \in \Gamma; \\ 0, & \text{if } P \in \overline{C\Omega}. \end{cases}$$

The integral

$$W(P) = (1/2\pi) \int_{\Gamma} f(X) \omega(P, dX)$$

is called the potential of a double layer with the continuous density $f(X)$. The internal and external limiting values of $W(P)$ for $P \rightarrow S$, $S \in \Gamma$, are given by the expressions

$$\begin{aligned} W^{(i)}(S) &= f(S) + (1/2\pi) \int_{\Gamma} f(X) \omega(S, dX), \\ W^{(e)}(S) &= -f(S) + (1/2\pi) \int_{\Gamma} f(X) \omega(S, dX). \end{aligned}$$

Card 2/3

Double layer potential for...

S/020/62/147/003/002/027
B112/B186

They are represented in the form

$$w(i) = f + Tf, \quad w(e) = -f + Tf.$$

The estimate

$$\|T\| = (1/2\pi) \sup_{S \in \Gamma} \int_{\Gamma} |\omega(S, dX)| \leq M/2\pi + 1$$

is derived. The Fredholm radius of the operator T is found to be equal to

$$2\pi \inf_{S \in \Gamma} (1/|\omega(S, S)|).$$

TITLE: On the maximum principle for a class of operators in the Banach space

PERIODICAL: Leningrad. Universitet. Vestnik. Seriya matematiki, mekhaniki i astronomii, no. 1, 1963, 64-69

TEXT: This is a continuation of previous work reported by the author and P. Ye. Sobolevskiy (UMN, 6, 1962). To begin with, a linear functional f_x in a real Banach space B is considered and is such that $f_x(x) = \|x\|_B$ and $\|f_x\| = 1$. An operator A , acting in B with a domain $D(A)$, is then defined as belonging to the class $N(B)$ if for any element $x \in D(A)$

$$f_x(Ax) \leq \omega \|x\|_B. \quad (1)$$

Card 1/3

S/043/63/000/001/003/011
D218/D308

On the maximum...

The "parabolic" equation

$$\frac{dx}{dt} = A(t)x + \varphi(t), \quad t \in [0, T], \quad \varphi(t) \in B, \quad (6)$$

is then considered, where B is an arbitrary Banach space. It is shown that the following estimate holds for the solution of Eq. (6):

$$\|x(t)\|_B \leq \|x(0)\|_B e^{\int_0^t \omega(\tau) d\tau} + \int_0^t \|\varphi(\tau)\|_B e^{\int_0^t \omega(\sigma) d\sigma} d\tau. \quad (8)$$

A further equation, which is discussed, is

On the maximum...

S/043/63/000/001/003/011
D218/D308

$$\frac{d^2x}{dt^2} + A(t)x = 0, \quad t \in [0, T], \quad (11)$$

for which it is shown that, if $x(t)$ is the solution, then the maximum value of $\|x(t)\|_B$ is reached at one of the ends of the segment $[0, T]$. It is further shown that the differential operator

$$M = -a_{ijkl}D_{ijkl} + b_{ijk}D_{ijk} + c_{ij}D_{ij} + d_iD_i + e \quad (13)$$

belongs to the class $N(L_p)$ where $3/2 < p < 3$.

tial theory, double layer potential, single layer potential

ABSTRACT: In a previous paper (DAN 147, #3 (1962)), the authors generalized
Radon's results (UMN 1, #3-4(1946)) pertaining to the potential of a double layer.
In the present communication, they give a generalization of Radon's theory deal-
ing with the potential of a single layer, and with the solubility of the Dirichlet
and von Neumann problems. Two theorems are proven concerning the external
and internal boundary fluxes of the potential of a single charged layer. The condi-
tions for the solubility of the Dirichlet and von Neumann problems are determined.

ABSTRACT: In spaces of generalized functions, the authors study singular equations on the plane under the condition that the symbol can go to zero along a finite number of rays. In contrast to the case where the symbol is not degenerate, the solution of equations of convolution type which they treat is not uniquely determined. For equations of convolution type the authors consider three properly posed problems (in which conditions to guarantee unique solvability are adjoined). They give a problem for an equation with a symbol weakly depending on a pole. A typical problem is

$$Au = f, (A_k^* u, 1) = \psi_k(\rho), (k = 1, \dots, s = \sum_{j=1}^N l_j), \quad (1)$$

where A_k are singular operators with symbols $\Phi_k(\theta) \in \mathcal{L}_2^{(l)}$ and
